

PRESS RELEASE

Altdorf, May 2020

mediCAD® as preoperative planning software getting more and more popular on the French market

Since 2016, mediCAD Hectec GmbH, the German based company with its preoperative planning solutions mediCAD® 2D, 2D Web and 3D have seen a constant increase in the number of installations in public hospitals, private clinics, and doctor offices on French territory. As of today, the company has more than 50 sites installed, whether in public or private institutions. The referencing for the multipublisher SCC-UGAP markets in 2018 enabled an accelerated growth in the deployments at public hospitals in 2019. The mediCAD® solutions are compatible with any implant vendor templates, any PACS installation at the site, and offer the highest number of orthopedic planning functionalities for

any joint (hip, knee, ankle joint, foot, long leg, shoulder, elbow, hand or spine). With the expansion of the French sales and technical team beginning of April, the company has shown the importance of the French market to their business development, in order to bring dedicated services to customers directly in French territory. Especially the latest product mediCAD® Web brings a lot of attention to the French market and "we are confident that with the variety of the mediCAD® product range, we will continue to offer the French market the perfect tools for the future of preoperative digital planning in orthopedic surroundings", states Pierre Collet, Director Sales of mediCAD France.

mediCAD - The Orthopedic Solution

mediCAD Hectec GmbH has been developing software solutions for orthopedic surgeons since 1994. Our goal is to, in all aspects, digitally enable efficient and secure planning for joint and/or traumatic bone surgeries – in hospitals and clinics as well as in practices.

In 1999, mediCAD HECTEC GmbH was the first company worldwide to develop a software program that allows the user to create complete and professional pre-operative planning for a joint replacement in a digital environment with just a few keystrokes/clicks.

With the **mediCAD**® and **mediCAD**® **Web** solutions, the company has set an innovative milestone worldwide in supporting surgical orthopedics. By automatically archiving all the necessary information and ensuring consistent traceability of the findings, pre-operative preparation and follow-up care, **mediCAD**® offers the ideal opportunity for your optimally prepared, professionally managed and audit-compliant, documented operation, with the correspondingly recorded follow-up care.

Thanks to its close cooperation with leading companies in the medical technology field and the successful use of **mediCAD®** in more than 3,500 hospitals worldwide, mediCAD HECTEC GmbH, with around 50 employees, is already a global player in the field of medical software solutions.
